PROFILE

Enthusiastic third-year AIML student with a strong foundation in data structures, database management, automata theory, and computer networks. Passionate about machine learning and eager to apply theoretical knowledge to real-world challenges. Adept at collaboration, problem-solving, and continuous learning. Actively seeking internships and hands-on opportunities to contribute to and grow in the evolving field of artificial intelligence.

EDUCATION

2022-present

ST JOSEPH ENGINEERING COLLEGE

- BE in Artificial Engineering and Machine Learning
- CGPA: 8.45
- Data structures, DBMS, Computer Organization and Operating Systems

MINI PROJECTS

Payment receipt for fast food joints unsing python

- Developed a retail billing system using Python and Tkinter GUI, streamlining the billing process with an intuitive interface for handling transactions, calculating costs, applying taxes and adding items efficiently.
- It showcases ability to create practical software solutions using Python's Tkinter library.

Inventory Management using PHP, MySQL, JS, HTML and CSS

- Developed a web-based, user-friendly interface with JS,HTML,CSS, enabling efficient CRUD operations for managing inventory, customers, categories, brands, suppliers, purchases, and orders.
- Implemented real-time stock updates, secure user authentication, and enhanced usability.
- The system aimed to streamline inventory management for small to medium-sized businesses, ensuring accurate stock control and operational efficiency.
